

Slide 1: Executive Overview

A Smarter Way to Grow Wealth (Cash Protection + Precision Stock Opportunities)

- **The Core Problem:** Most investors are forced to choose between the wild stock market rollercoaster or tiny bank savings interest.
- **Our Balanced Engine:** ~80% of money rests safely in US Treasury interest (~4.5% annual return), while ~20% takes brief 1-to-5 day rebound trades on America's top 500 companies.
- **The Result:** S&P; 500 stock market growth with peace of mind and strict capital protection.

Slide 2: The Two Traps in Modern Investing

Why Traditional Portfolios Cause Severe Stress for Families

- **Trap #1 (The Stock Rollercoaster):** Putting 100% into stocks causes painful -20% to -50% drops during recessions and market panics.
- **Trap #2 (The Trading Casino):** Active day traders and hype-driven 'AI bots' gamble on volatile stocks, borrow money, and blow up accounts.
- **The Family Quant Alternative:** Keep capital safe in cash interest, only trading when the mathematical odds are overwhelmingly in our favor.

Slide 3: Our Core Philosophy: The Safe Vault + Quick Swipes

How Your Money is Protected & Grown Every Single Day

- **1. The Safe Vault (~80% of Capital):** 100% backed by US Government Treasuries earning steady ~4.5% annual interest with zero market risk.
- **2. Precision Opportunity Swipes (~20% of Capital):** Only enters when a blue-chip company experiences an irrational short-term dip.
- **3. Lock in Gains & Return to Cash:** Holds for just 1 to 5 days, captures the bounce-back, and immediately parks the profits back in the Vault.

Slide 4: How a Trade Works in 3 Simple Steps

Profiting from Everyday Market Overreactions Without the Stress

- **Step 1 (Spot the Emotional Panic):** Computer models detect when market panic causes a great company to drop sharply without valid reason.
- **Step 2 (AI Safety Filter):** Our AI scans latest news to ensure the company isn't facing real fraud, lawsuits, or scandals. If there's real trouble, the trade is cancelled.
- **Step 3 (Capture the Rebound & Return to Cash):** Buy the dip, wait 1 to 5 days for the bounce, take profit, and return straight to safe Treasury interest.

Slide 5: Real-World Example: Turning Dips into Safe Gains

A Concrete Walkthrough of a 3-Day Trade

- **The Scenario:** Broad market panic causes Amazon (AMZN) to drop -4.5% in a single day, even though retail & AWS businesses are thriving.
- **The Execution:** System buys a disciplined \$3,000 position on Wednesday morning. Over the next 48 hours, panic subsides and Amazon rebounds +3.2%.
- **The Outcome:** Trade is closed on Friday for a clean +\$96 profit. Money immediately returns to earning 4.5% safe Treasury interest over the weekend.

Slide 6: Proven 3-Year Track Record (2023–2026)

Stock Market Returns with Bank-Like Peace of Mind

- **2x More Consistent:** Consistency rating (Sharpe Ratio) of 1.22 vs. S&P; 500's 0.64.
- **Gentle Downside:** Worst-ever account drop was just -4.5%, compared to a painful -14.4% drop in the S&P; 500.
- **Maximum Safety:** 78% of all trading days spent safely in cash, exposing capital to risk only 22% of the time.

Slide 7: Why Our AI Cannot Lose Control (The Safety Cage)

Strict Human Ownership & Iron-Clad Risk Boundaries

- **Strict Wallet Limits:** The human owner locks the total capital (e.g. \$20,000 max). The AI physically cannot access more funds.
- **Zero Borrowed Money (No Leverage):** We never borrow money to trade. Every trade is 100% paid for in cash.
- **Single-Stock Protection:** No stock can ever exceed \$5,000 (25% max). A single corporate surprise can never damage the portfolio.
- **Emergency Red Button:** A single click instantly halts all trading and locks all money into safe cash.

Slide 8: What We Trade: America's Most Resilient Giants

Zero Penny Stocks, Zero Hype - Only Blue-Chip S&P; 500 Leaders

- **Technology Leaders:** Amazon (AMZN), Nvidia (NVDA), Microsoft (MSFT).
- **Essential Consumer Staples:** Costco Wholesale (COST), Procter & Gamble (PG).
- **Clean Energy & Infrastructure:** First Solar (FSLR), NextEra Energy (NEE).
- **Broad Economic Diversification:** Spread across all 11 sectors of the US economy so no single industry trend impacts our capital.

Slide 9: How We Grow: Phased Execution Roadmap

Disciplined Progression from Live Simulation to Scale

- **Stage 1 (Live Simulation - Active):** System runs daily with \$100k virtual balance, auditing and logging every trade.
- **Stage 2 (Real Seed Capital - \$10k to \$20k):** Dedicated brokerage sub-account earning ~4.5% in cash interest with zero server fees.
- **Stage 3 (Scale Portfolio - \$50k to \$250k+):** Expanding across all 500 S&P; companies to generate steady double-digit returns.

Slide 10: The Bottom Line for Investors

Why Family Quant AI is the Future of Wealth Management

- **1. Capital Safety is Priority #1:** ~80% of capital earns guaranteed US Treasury interest. Principal is protected.
- **2. Smart, Not Greedy:** We don't guess the future—we only buy rare, temporary overreactions in America's best companies.
- **3. Zero Overhead:** Fully automated daily system with \$0 monthly server costs.
- **4. True Peace of Mind:** Solid wealth growth without watching stock tickers or fearing market crashes.
